

# Comprehensive Inpatient Rehab Program Outcomes

This page highlights some of our Program's patient outcomes. If you would like more information on outcomes, please ask your Pre Admission Coordinator or Rehab Care Coordinator.

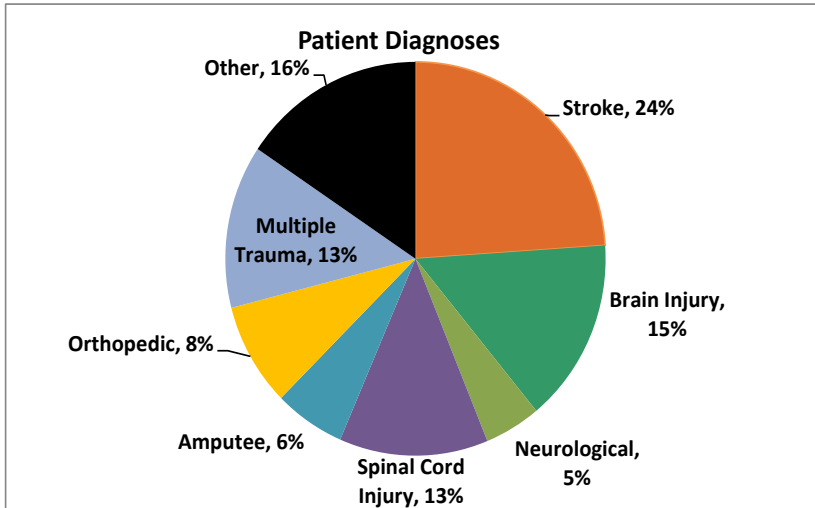

Number of patients: **648**

57% were males

43% were females

Average Days in Program: 15

>=3 hours of therapy per day

## Discharge Disposition

The ability to return home is a key outcome of an Inpatient Rehab Program. WFBH's Program discharges a higher percentage of patients to home/community than other rehab facilities across the nation.

Age Group	Number of Patients
13-17	21
18-40	115
41-65	272
66-85	214
86-100	26

## Functional Improvement

### Average Functional Improvement for Patients in Our Program:

Self Care	58%
Bowel & Bladder Control	44%
Locomotion (Walking/Stairs)	99%
Bed, Toilet, & Chair Transfers	80%
Communication	13%
Interaction/Memory/Problem Solving	13%
Overall	43%

Patients work with the care team to set functional improvement goals in the areas listed above. Improvement is defined as the change in functional scores between admission and discharge from the Program.
