

Vervet Request Form Instructions

Please include all relevant contact information.

Please include the date by which you would like the request completed.

Please indicate whether your proposed project would be supported by NIH funds (i.e., through a grant already funded or through a grant which will be submitted to NIH). Since the colony is partially supported by NCRR, NIH-funded requests will take priority.

Include a project name that clearly describes your project. Include a lay summary of the proposed project such as:

1. The relevance of the project
2. The scientific merit of the project
3. The details of the procedures proposed
4. The impact the work will have on the animals
5. Whether or not the study will take place within the colony or not

Indicate the number, sex and age of the subjects requested. Indicate whether or not the proposed project would interfere with the simultaneous or future use of the same animals. If yes, include a description of how the animals will be impacted. Keep in mind that the colony is managed as a shared resource with multiple investigators often using the same animals simultaneously.

Specify the type of data requested. This could include pedigree or genetic information, behavioral and/or physiological phenotypes.

Please indicate if any phenotypic or genetic data will be added to the VRC data repository. Projects that add to the data repository will be given priority over those that do not.
