

Center on Diabetes, Obesity and Metabolism Seminar Series Presents:

Deciphering the mechanistic basis of the genetic contribution to Type 2 Diabetes Mellitus in Humans

Swapan K. Das, PhD

Assistant Professor, Endocrinology and Metabolism

Dr. Das has a broad background in genetics and genomics research, with specific training and expertise in human molecular genetics and genomics. His research focus is to find genetic susceptibility factors for insulin resistance and Type 2 diabetes. His laboratory utilizes genotype, gene expression and metabolic phenotype data of human subjects and cell culture-based in vitro experiments to understand genetic regulators involved in insulin resistance and related phenotypes.

Monday, November 21, 2016

4:00 – 5:00 p.m.

Comprehensive Cancer Center, 10th floor, Room 10B
