Contact Debbie Olson at (336)716-0457.

Course Objectives
At the conclusion of this activity, the participant should be better able to:
- Compare radical prostatectomy (open vs. robotic assisted) with observation and other primary treatments of localized prostate cancer.
- Summarize the impact of the 2009 revised staging criteria on lung cancer diagnosis.
- Discuss prevention, assessment, and management of chemotherapy induced peripheral neuropathy (CIPN).
- State three different dermatologic toxicities related epidermal growth factor receptor (EGFR) inhibitors.
- Describe current approaches to treat adults with ALL using subset specific therapy.
- Review evidence-based recommendations for prophylaxis and treatment of venous thromboembolism in malignancy.
- Define treatment options for therapy for older women with breast cancer.
- Summarize the basis for using anthracyclines as adjuvant therapy for breast cancer.
- Critically examine data on non-anthracycline adjuvant regimens.
- Review the nature of information provided by various clinical genetic tests.
- Describe the critical role of cytogenetics in the management of myelodysplastic syndrome (MDS) and acute myeloid leukemia (AML).
- Outline current strategies for the diagnosis, prevention, and treatment of bisphosphonate-
