Trouble Sleeping?

Wake Forest Baptist Health is conducting a research study on a new, noninvasive technology that uses auditory tones to improve brainwave balance—reducing the symptoms of insomnia.

You may qualify if you:
- Are at least 18 years old
- Have moderate or severe insomnia

This study involves:
- Four study visits
- Ten sessions (90–120 minutes each) listening to auditory tones, while relaxing in a chair
- Compensation for time and travel
